FINAL VERDICT

Footprint Score

Privacy Score

Concentration Risk

68/100

With 15 services spanning social media, gaming, shopping, payments, and communication, your estimated digital footprint is **Significant (70/100)**. Your Privacy Score of **30/100 (Weak)** indicates your current app portfolio is weighted heavily toward ad-funded platforms with extensive, publicly known data collection practices. The concentration of 6 services under Google and 2 under Meta creates the highest cross-platform profiling risk in your stack.

Implementing the six simulator actions — tracking opt-outs, switching to Signal, using privacy-first search, and auditing app permissions — could raise your Privacy Score from 30 to approximately 66 (Good). This is an Estimate and for illustrative purposes only.

Action Recommended

All inferences are Estimates. No private databases accessed. Facts are limited to 15 declared services.
