

Brain-Dump Action Planner

Skill Portfolio Showcase

Transforms raw notes, meeting transcripts, and brainstorming sessions into structured action plans, risk assessments, and interactive dashboards.

Skill	brain-dump-action-planner
Version	1.0
Purpose	Meeting notes → structured action plans
Output	7-section dashboard with metrics, tasks, risks & blockers

01

Skills Page

Skill library overview

The Skills Page provides a central library of all installed capabilities. Each skill tile shows its name, description, and trigger conditions.

brain-dump-action-planner Transforms notes into structured plans ● Active	docx Create and edit Word documents ● Active

The highlighted purple tile shows the active brain-dump-action-planner skill.

02

Skill Creation Form

Define a new skill

The creation form captures skill metadata: name, description, trigger conditions, and expected outputs.

Skill name

brain-dump-action-planner

Description

Transforms unstructured notes, meeting transcripts, brainstorming sessions, class notes, and voice memos into structured action plans, summaries, risks, blockers, open questions, and dashboards.

Trigger conditions

Use when: user provides raw notes, meeting transcripts, or any unstructured text and asks for a structured plan, summary, or action items.

Expected outputs

Executive summary · Key discussion points · Action items table · Risks · Blockers · Open questions · Next steps · Interactive dashboard

Saved Skill

Skill stored in the library

Once saved, the skill appears in the library with its full configuration and SKILL.md file.

brain-dump-action-planner

● Active

Transforms unstructured notes into structured action plans and dashboards.

SKILL.md

```
Analyze any notes or transcripts provided. Generate: 1. Executive
Summary 2. Key Discussion Points 3. Action Items 4. Risks 5.
Blockers 6. Open Questions 7. Next Steps 8. Interactive Dashboard
Format output using tables and clear sections. Prioritize
actionable insights over raw notes.
```

04

Test Input

Raw meeting notes used as input

The following unstructured meeting notes were provided as the test input to the skill:

Project Meeting Notes Need portfolio website completed by Friday. Saanvi will handle frontend. Riya will prepare content. Need hosting options. Concern about mobile responsiveness. Budget not finalized.

7 raw bullet points → structured 7-section dashboard output.

05

Dashboard Output

Executive summary and metrics

The skill produces an executive summary and four key metrics at a glance.

The team is targeting a portfolio website launch by Friday. Saanvi owns frontend development; Riya handles content. Key concerns — mobile responsiveness, hosting selection, and an unfinalized budget — need resolution before work can fully proceed.

Deadline

Friday

~5 days away

Action items

06

Action Items Section

Tasks, owners, priorities and deadlines

All action items extracted from the notes, assigned to owners with priorities and deadlines.

Task	Owner	Priority	Deadline	Status
Finalize and approve project budget	Team	High	ASAP	Blocked
Research and select hosting provider	Team	High	Tue	Pending
Complete frontend development	Saanvi	High	Thu	In progress
Ensure mobile responsiveness	Saanvi	High	Thu	Not started
Prepare all website content	Riya	Medium	Wed	In progress
Final review and sign-off	Team	Medium	Fri AM	Not started

The skill automatically identifies what could go wrong and what is actively preventing progress.

Risks

- ! Mobile responsiveness discovered late may delay Friday deadline
- ! Undefined budget could force last-minute hosting or design compromises
- ! Content delays from Riya could block Saanvi's layout work

Blockers

- Budget not finalized — limits hosting choice and any paid tools
- No hosting provider selected — deployment cannot be planned

Open Questions

- ? Which hosting provider will be used? (e.g. Vercel, Netlify, shared hosting)
- ? What is the confirmed budget, and who has authority to approve it?
- ? Are there specific mobile breakpoints or devices Saanvi should prioritize?
